

ABHISHEK KUMAR SINGH

Software Engineer | Full-Stack Developer - ASP.NET & Python/Django

Pune, Maharashtra, India | +91-9133961438 | abhisheksingh913396@gmail.com | linkedin.com/in/abhishek-kumar-singh03 | github.com/Shakes3

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building and maintaining full-stack web applications and enterprise systems using **ASP.NET Core**, **ASP.NET MVC**, **C#**, **Python**, and **Django**. Skilled in relational database engineering (**SQL Server**, **T-SQL**, **stored procedures**, **transactional replication**, **ETL**) and **REST API development**, with hands-on ownership of production **CMS**, **eCommerce**, and **ERP-integrated systems** for enterprise clients. Experienced across the full **SDLC** — requirements gathering, development, **unit/integration testing**, **UAT**, and **CI/CD deployment** with **Jenkins** and **Docker**. Comfortable collaborating directly with cross-functional and international teams in Agile/Scrum environments.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, SQL (T-SQL)

Backend Frameworks: ASP.NET Core, ASP.NET MVC 5, Django 5/6, REST APIs

Frontend: HTML5, CSS3, JavaScript, jQuery, Angular, AJAX

Databases: Microsoft SQL Server, MySQL, T-SQL, Stored Procedures, Views, Table-Valued Functions, Query Optimization, Transactional Replication, ETL

Integrations: REST API Development, JWT Authentication, Cloudflare API, Google Maps API

DevOps / CI-CD: Jenkins, Docker, GitHub, GitLab, Bitbucket, Docker Hub

Testing & QA: Unit Testing, Integration Testing, UAT, Debugging & Defect Resolution

Tools: Visual Studio, VS Code, SQL Server Management Studio (SSMS)

Methodologies: Agile, Scrum, SDLC

PROFESSIONAL EXPERIENCE

Software Engineer - LTIMindtree

Pune, India | January 2024 - Present

Kidde Fenwal (KFL) - Full Stack Application Development

- Lead end-to-end development and ongoing enhancement of CMS and eCommerce applications using **Python 3.x**, **Django 5/6**, **ASP.NET Core (.NET Framework 4.8)**, **C#**, **MySQL**, and **SQL Server 2019**, translating business requirements into reliable, user-facing features for production systems.
- Design and build **SQL stored procedures**, **table-valued functions**, and **views** against the JDE database to support core business workflows, improving application functionality and usability across production systems.
- Implement application-layer security by integrating the **Cloudflare API** for bot protection and request validation; integrate the **Google Maps API** to add location-based features to the application.
- Implement **SQL Server Transactional Replication** to synchronize data in real time between the JDE source database and the core application database, maintaining data consistency and availability across systems.
- Design and build an automated **ETL workflow** to replace a manual JDE-to-application data transfer process, reducing manual errors and processing time.
- Extend the **Jenkins CI/CD pipeline**, integrating **GitHub** and **Bitbucket** to automate build, test, and deployment workflows; containerize application components with **Docker** to standardize environments and streamline releases.

Carrier - Full Stack Application Development & Maintenance

- Maintain and enhance **15+ commercial** and **CMS applications** built on **ASP.NET (.NET Framework 4.8)**, **C#**, and **SQL Server 2019**, driving improvements in functionality and user experience.
- Build and optimize front-end components using **Angular**, **HTML5**, **CSS3**, **JavaScript**, and **jQuery**; redesigned critical high-traffic pages, improving page load performance by **30%**.
- Configure **Jenkins** build pipelines and **Docker**-based deployment workflows to support consistent, repeatable releases across environments, reducing manual deployment effort.
- Manage the **Microsoft SQL Server database layer** — writing stored procedures, optimizing queries, and maintaining data integrity — and produce SQL-based reporting outputs each release.
- Test and debug across application and database layers, reducing post-release defects by **25%**; collaborate with clients in **Agile/Scrum** ceremonies to deliver on schedule.

PERSONAL PROJECTS

Inventory Management System - Full-Stack Web Application

- Built a full-stack inventory management application using **ASP.NET Core (C#)** for the backend, SQL Server for data persistence, and **HTML5, CSS3, JavaScript**, and **jQuery** for the frontend.
- Implemented **REST API** endpoints, AJAX-driven UI interactions, and role-based access control secured with **JWT authentication**; managed the full source lifecycle with **Git**.

Stack: ASP.NET Core, C#, SQL Server, T-SQL, HTML5, CSS3, JavaScript, jQuery, AJAX, REST API, Git

Paws Club - Django Full-Stack Application

- Designed and built a full-stack website for a dog-hostel business using **Python** and **Django 6**, including a responsive multi-page front end (Home, Services, Blog, Gallery, About, Contact) and a Django Admin portal for non-technical staff.
- Implemented data models for services, blog posts (with slug-based routing), a photo gallery, customer testimonials, and contact-message tracking, enabling full site content management through the admin panel without code changes.
- Integrated **Summernote** for rich-text blog authoring, Pillow for image handling, and **WhiteNoise** for static file serving; deployed to production on **Render.com**.

Stack: Python, Django 6, MySQL, HTML5, CSS3, JavaScript

EDUCATION

Bachelor of Technology, Electronics and Communication Engineering

Laxmi Narayan College of Technology Excellence - Bhopal, Madhya Pradesh

Graduated April 2023 | CGPA: 8.13 / 10

AWARDS

- **Super Crew Award** - recognized for strong code quality, reliable solution delivery, and consistent performance.
- **Hi-Five Award** - recognized for database engineering work on JDE ETL automation and SQL Server Transactional Replication.
